

ORDER MANAGEMENT:  
EVERYWHERE,  
IN REAL-TIME.

POCKETOFFICE

Enhanced mobility solutions

## Pocketoffice

is a system developed by Systech that provides to sales consultants operating in jewellery and watches sectors to manage process of data access, acquisition, sharing and sending. In real-time and in full mobility.

For many companies, sales consultants are the heart of their own business, the most important role with respect to the potential income and the corporate brand of their firm on a local area: to sum up, sales network is the driving force that can make the difference.

In this context Systech is proud to introduce you **Pocketoffice, the leading-edge platform for mobility solutions** especially conceived for distribution companies operating in jewellery and watches sectors with a mobile sales network.

The advanced ID automatic data technologies (barcode, RFID and voice) provide to sales consultants operating in mobility an enhanced process control device in order to manage and streamline all daily tasks, such as order entry and management, reporting and statistics view.

In step with the current needs and trends, Pocketoffice makes use of Smartphone e tablet devices based on the modern **iOS - Apple -and Android platforms**. Smart, easy-to-use, compact, equipped with "instant-on" function and at a very competitive price, these devices stand out the market: sales consultants can operate in full mobility and offer a better sales experience thanks to the interactivity. As a consequence, the company brand results more captivating.

# System architecture

Pocketoffice system is based on three essential components:

mobile

The operating system installed on a portable device. It performs data acquisition, sharing and sending operations.

connect

The operating system installed on a PC, for connection via USB, Wireless, UMTS/GPRS and data sharing between portable devices and the head office.

control

The operating system installed on a PC, for management of exchanged data between portable devices and the head office.

## Program functions

Pocketoffice is a customisable SW, also available in multilingual version, used by operators dealing with the whole business process in mobility. This platform provides to manage:

- > **Items photo book;**
- > **On-line and offline functioning;**
- > **Two different kind of sales: by the piece or with gold withdrawal;**
- > **Sale-or-return items;**
- > **Cash flow with customer open payments views;**
- > **Detailed print on order closing, with sold items, sale-or-return items and cash flow views;**
- > **Orders entry during trade fairs.**

## A solution full of benefits

Simple and easy-to-use, fully compatible with the available IT system, Pocketoffice allows you to:

- > **be in constant sync with the company IT system**
- > **save time usually spent on standard and recurring tasks**
- > **reduce the margin of error in filling orders and sharing data between the company head office and the sales consultants operating in mobility**
- > **offer a better service quality to your customers**
