

AURUM Labeling

Hi-tech solution for label printing

LABELS

Extra 4 AURUM

HARDWARE

When the label marks out the product, you are using **Aurum Labeling** system supplied by Systech.

Exclusive distributor in Italy, Systech s.r.l. provides to the Italian market the first-class German labels made by Ferdinand Eisele -since 1931, one of the most important manufacturers of labels especially created for jewellery and watches sectors. The best choice to satisfy the Italian jewellery sector, a demanding market of long tradition, leading in craftsmanship worldwide.

According to the quick economic changes, Systech introduces a versatile and precise system conceived for the specific needs of who manufacture and trade in valuables, providing a better control of the whole management process, an up-to-date company brand and data always on hand.

Choose **Aurum Labeling** and leave behind you the constraining limits of paper labels for manual marking, prone to paper and ink wear, fragility and the same old standard size.

AURUM Labeling: hi-tech solution for label printing

> Extra 4 Aurum

Labels:
Customization and flexibility

Aurum labels can be printed from a PC. Printers work with special carbon ribbons fitted for Thermal Transfer printing. The chemical composition of the ink, the technique performed and the printing support device assure top results concerning the durability of information printed on the label despite the large number of treatment applied to jewellery items.

According to the user's needs, the printing system can be based on two different solutions (hardware and software). For each one we provide installation, an accurate training course and a maintenance and assistance engagement.

Extra 4 Aurum

- > Extra 4 Aurum software
 - > Thermal Transfer printer
 - > labels and ribbons, application accessories

Aurum Labeling allows to:

- > undoubtedly identify every single item;
- > efficiently manage the items range;
- > enhance and speed up incoming and outgoing goods;
- > certify the quality and the origin of every item;
- > guarantee an effective assurance.

Aurum Labeling allows the user to decide which label type is more suitable for his/her practical use and communication needs.

Technical features of Aurum labels are:

- > size
- > dimensions
- > colour (also transparent colour is available)
- > material (glossy or matte)
- > finishing
- > content

The innovative material used for Aurum label is a special plastic paper with a high degree of resistance to wear and tear, heat, ultrasonic cleaning, humidity and chemical agents.

Moreover, it is possible to realize auto adhesive labels with permanent adhesive, easy to remove, with no residual material on the marked surface.

It is also easy and quick to apply labels. You can manually perform specific adhesive systems -for rings, colliers, earrings, pins, watches and glasses- or non-adhesive systems using nylon/cotton thread or adequate plastic supports.

How can you match item ID with a deeper guarantee needs during its handling? With RFID (Radio Frequency IDentification) labels, containing a microchip for this scope. All data electronically stored and placed in the label can be transmitted through radio waves received from adequate readers equipped with a receiver system, making absolutely useless the visual contact with the label.
