- > AURUM
- > POCKET OFFICE
- > WAREHOUSE

Three are the solutions conceived by Systech for wholesalers and distributors. For each one we provide **installation, an accurate training course and a maintenance and assistance engagement.**

AURUM NETWORK

The LAN Network multiseat configuration is suggested to manage activities of one single retailer from various workstations. Components are:

MANAGEMENT WORKSTATION

- > Aurum SW NETWORK server, Easy or Pro ver.
- > Thermal Transfer printer for items loading
- > Optical Barcode reader for items unloading
- > Labels and ribbons, application accessories
- > Handheld inventory (optional)

SALES WORKSTATION

- > Aurum SW NETWORK server Cash, Easy or Pro ver.
- > POS PC and cash register
- > Optical Barcode reader for items unloading
- > Handheld inventory (optional)

POCKET OFFICE – Sales force automation

Thanks to compact handheld devices, Pocket Office system makes automatic the acquisition sales data in mobility, i.e. during a visit to your customers or in a trade fair. Available versions with different performance levels are three:

- Sales consultants can match every single item with every single customer ID code through a handheld devices equipped with an Optical Barcode reader.
- Sales consultants can also issue receipts, delivery notes or transaction certificate to the customer.
- High value-added features: access to the on line catalogue, customer open payments and incomes management, data sharing to the head office via GPRS/UMTS, queries and statistics.

WAREHOUSE – Supply Chain Solutions

Warehouse system is the Systech offer to manage your Supply Chain. Different technologies for automatic data identification such as Barcodes, RFID and Voice are integrated in one single IT platform: the most suitable devices to warehouse operators' activities in order to start a real integrated logistics system supporting an increasing productivity.

Warehouse is a system intended for remote devices management: through the integration with the company IT system it can manage all warehouse activities. The remote system, composed of mobile devices assigned to agents in mobility, allows to acquire, control and verify all warehouse data, making them available to the company IT system.

As a consequence, you could benefit from an enhanced logistics management: tracking, acquisition, loading, stocking, picking and handling of items.

The system is composed of various software with specific functions:

- > **WH Control:** a processing SW that controls the head office operating system;
- > **WH Mobile:** a processing SW conceived for mobile devices;
- > **WH Connect:** a processing SW that connect all mobile devices to the company network; automatic ID systems.
